### **FINAL AREA PLANTED AND CROP PRODUCTION FIGURES OF COMMERCIAL MAIZE, SUNFLOWER SEED, SOYBEANS, GROUNDNUTS AND SORGHUM FOR 2022**

At a meeting held on 9 February 2023, the Crop Estimates Liaison Committee (CELC) oversaw the process for the finalisation of the crop production figures of commercial white and yellow maize, sunflower seed, soybeans, groundnuts and sorghum for 2022.

The estimated total production figures as released by the national Crop Estimates Committee (CEC) were revised, using the published figures of the South Africa Grain Information Services (SAGIS) of actual deliveries as the basis for the calculations. The figures from the maize utilisation survey to determine on-farm usage and retentions, which was conducted by the Department of Agriculture, Land Reform and Rural Development (DALRRD) and the telephonic survey conducted by the National Crop Statistics Consortium (NCSC), were added to the SAGIS delivery figures to calculate the final crop production figures.

Comparing the final calculated crop figures with the numbers set by the CEC during November 2022, the size of the commercial maize crop is now 15,470 mill. tons, which is 0,54% or 82 800 tons more than the final crop estimate figure of 15,387 mill. tons. For white maize, the recalculated crop size is 7,850 mill. tons, which is 0,77% or 60 250 tons more than the final crop estimate figure, and for yellow maize the recalculated crop size is 7,620 mill. tons, which is 0,30% or 22 550 tons more than the final crop estimate figure.

In the case of the commercial sunflower seed crop, the final calculated crop figure is unchanged from the final crop estimate figure of 845 550 tons. The soybeans crop is 2,230 mill. tons (up by 1,32% or 29 000 tons), whilst the final groundnuts crop is 48 500 tons, which is 500 tons or 1,02% less than the final crop estimate figure. The sorghum crop also remained unchanged from the final crop estimate figure of 103 140 tons.

CELC accepted the final recalculated crop production figures for 2022 (please refer to the figures in the accompanying tables).

The CEC would like to thank all producers and industry role-players who provided information on a regular basis to improve the accuracy of the crop estimates. Producers, who do not participate in the Department's monthly survey, are requested as a matter of urgency to make an effort to contribute to the crop estimates process.

2) SAGIS producer deliveries relates to the current crop.

3) Projected deliveries for maize, sunflower seed and soybeans are based on the historic trend of producer deliveries (as recorded by SAGIS) for the month of February. With regard to sorghum and groundnuts, projected deliveries are based on the historic trend of producer deliveries for the month of January and February.
